

Grigorii Barabanov

Senior Frontend Developer

Frontend engineer with 5+ years of expertise building high-scale web products. Exceptionally deep on the frontend — from rendering performance to design systems — with solid backend knowledge (Node.js, REST/GraphQL API design) and a growing edge in applied AI: LLM integration, prompt engineering, and AI-driven UI. I bring product thinking, technical rigour, and a bias toward shipping.

EXPERIENCE · 5+ YEARS

Frontend Teamlead

05.2024 — Present

 Navio

Led a team of 8 frontend engineers in developing a teleoperations service for remote control of autonomous vehicles, enabling human intervention when the autopilot encounters challenges.

- Mentored & developed talent: guided a mid-level frontend engineer to senior-level proficiency through coaching and hands-on support.
- Built a permissions management system from scratch — designed and implemented a staff permission service to regulate access for controlling autonomous vehicles.
- Spearheaded the teleoperations platform, collaborating with product owners, backend engineers, and QA teams; oversaw end-to-end feature delivery from planning to production.
- Engineered a local teleoperation system enabling operators to control autonomous vehicles directly from a laptop in a local network environment — full vehicle management without infrastructure dependency.
- Built a Mattermost bot in Go that integrates with Jira, Confluence, and the internal deploy pipeline; can switch vehicle environments, trigger deployments, and answer project questions via Cursor CLI using AI.

Senior Frontend Developer

10.2022 — 05.2024

 VK

Worked in the news feed team improving user experience with VK news feed (50M+ DAU).

- Improved TTI and FCP metrics on /feed page by ~7%.
- Built product features in the user profile page, growing social interaction metrics by ~5%, which affected user time spent and paid service uptake.
- Rewrote vk.com/friends/* pages from old PHP + JS stack to React, Effector, and TypeScript.

 Yandex

Middle Frontend Developer	05.2022 — 10.2022
Junior Frontend Developer	09.2021 — 05.2022
Trainee Frontend Developer	06.2021 — 09.2021
Trainee Frontend Developer	09.2020 — 01.2021

Worked across Yandex Zen, Yandex Business Trips and Yandex internal pages.

- Implemented a universal API for interaction with multiple service providers — zero new frontend code required to add a new provider.
- Integrated Yandex Messenger, Yandex Notifications, and other Yandex services into Business Trips.
- Developed an NPM package to collect all icons, fonts, and colors from projects; built a browser plugin for efficient code review comments.
- Conducted technical interviews and onboarded new employees.

PART-TIME ACTIVITIES

Teaching & Mentoring

06.2021 — Present

- Created new course content for Frontend Developer programs at Yandex Practicum.
- Supervised students in Yandex Summer Frontend School — helped with frontend questions, homework, and guided a student team to build a complete project from scratch.
- Lectured and mentored students at Bauman Moscow State Technical University in collaboration with VK.
